**DETAILED ACTION*****Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

**Claims 1 – 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over the U.S. Patent No.5,623,795 to Padgett, Jr. in view of the U.S. Patent No. 5,81,833 to Williams.**

In regarding to claims 1 and 3, Padgett discloses a blank construction (see Fig. 2) of an insulator construction 10 comprising an insulating layer (Abstract) having a central rectangular portion 14, a plurality of side sections 16, 18, each of the side section being attached to only one side (see Fig. 2) of the rectangular portion, two of the side sections being positioned in opposing position to each other (see Fig. 2) having two wing sections 28 attached thereto, and means for

Art Unit: 3635

securing (column 5, lines 1-2) the wing sections to a side section positioned adjacent to each of the wing sections.

Padgett does not disclose a substrate layer (heat reflecting) adhered to a heat insulation layer to form an insulation layer.

However, Williams discloses a substrate layer (heat reflecting) 29 adhered to a heat insulation layer 31 to form an insulation layer (see Fig. 5).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Padgett by using a substrate layer (heat reflecting) adhered to a heat insulation layer to form an insulation layer for a more effective heat insulation in order to minimize heat or cool loss and maximize energy efficiency.

In regard to claim 2, Padgett discloses a blank construction of an insulator construction wherein the securing means comprises mating hooks and loops (column 5, lines 1-2).

#### ***Allowable Subject Matter***

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
